Subject: greenscaping and golf courses...

Very interested in discussing with you my company's approach to non point source pollution and maintenance/construction of golf courses. We distribute a product that contains chelates, humic and fulvic acids, fungi and bacteria. Have had positive impact in several areas; reducing the need for synthetic fertilizers, herbicides and fungicides by enhancing the rhizosphere and increasing cell wall permeability. People are very slow to change, but they are starting to think about it!

You have a wonderful website, and you should be very proud of the work you are doing. Please email or call me in the States

Sincerely,

Steven J. Wilchinski, President
