Shalom,

I am currently working on an MSc. limnology/ paleolimnology project at Acadia University and I'm interested in determining how abundant cyanobacteria are in ultra-oligotrophic and eutrophic lakes in Nova Scotia. Can you either send or tell me where to get the following reports:

Soil & Water Conservation Society of Metro Halifax. 1992. Phytoplankton assemblages in six Halifax County lakes. 56p.

Soil & Water Conservation Society of Metro Halifax. 1993. Phytoplankton Assemblages in 21 Halifax Metro Lakes (Phase-B3 Limnology project), November 1993. 130p.

I'm hoping that these reports may be able to answer my questions about cyanobacteria.

Any help would be appreciated... Thank you.
